RISK FACTOR CALCULATION SHEET

Identify a HAZARD. Decide on the chance of it happening. Use scale below.

Likelihood		Risk band
1	A highly improbable occurrence (not known)	Low
2	A remotely possible (may have happened)	Low
3	An occasional occurrence (known)	Med
4	A frequent occurrence (happens)	Med
5	A frequent and regular occurrence	High
6	Almost a certainty (immediate ACTION to prevent a disaster)	High

Now decide how SEVERE the accident or illness could be. Use scale below.

Severity		Risk band
1	Negligible injuries/illness/damage	Low
2	Minor injury/illness/damage	Low
3	Major injury/illness/damage (RIDDOR?)	Med
4	Single fatality/serious illness/damage	Med
5	Multiple fatality/very serious illness	High
6	Multiple fatalities (including off site) Certain death from consequential illness	High

Likelihood x Severity = Risk Rating

e.g. 3 (an occasional occurrence) x 2 (minor injury/illness/damage) = 6
